

Manage Scheduled Tasks Across All Systems in the Enterprise

Quickly Distribute New Programs, Patches, and Updates to Every Windows System

KEY FEATURES

MANAGE TASKS

Modifies properties of existing tasks, as well as creates new tasks across multiple systems.

UPDATE CREDENTIALS

Changes the credentials used by the AT Service.

DEFERRED PROCESSING

Re-tries operations on offline or unavailable systems automatically.

SCHEDULED REBOOTS

Schedules reboots and messages for all managed systems, including remote machines.

AUDITED LOGS

Retrieves and caches remote task activity, including task creations and modifications.

STATUS MONITORING

Provides real-time interactive feedback on the progress of a scheduled task.

SECURITY UPDATES

Deploys Windows and Internet Explorer security updates and hotfixes.

APPLICATION DEPLOYMENT

Simplifies ability to push and run applications, specifically patch deployment.

COMPREHENSIVE REPORTS

Records and archives the sites and settings of all tasks.

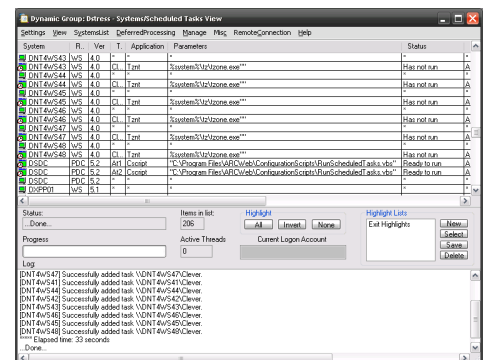

CENTRALIZED MANAGEMENT

Conducts all operations en masse across the enterprise from one console.

While the Windows operating system does include a built-in general purpose task scheduler, most administrators neglect this feature because it lacks enterprise management capabilities. This deficiency prevents administrators of large IT infrastructures from quickly performing some of the most common and critical administrative tasks such as remotely installing service packs, performing data backups, and updating antivirus software. And if organizations use the same administrator account to run scheduled tasks across multiple systems, it's difficult to find and change these credentials regularly, imperiling regulatory compliance.

TASK SCHEDULER PRO

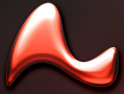

With Task Scheduler Pro these functions can be managed on all systems across the enterprise in a single operation, allowing crucial changes to be executed almost immediately. Task Scheduler Pro enables administrators to seamlessly add, remove, and edit scheduled tasks en masse. With rapid push and run capability, Task Scheduler Pro can send the same set of files to every system in minutes, and schedule them to execute immediately using the Windows built-in task scheduler service. These automated capabilities simplify patch reporting, patch rollout, and general program deployment, and significantly increase IT staff productivity.

View all tasks on every system, and all of the tasks properties.

SECURITY

Task Scheduler Pro also helps secure the enterprise by quickly rolling out new patches and antivirus software updates to combat the threat of malicious software attacks. A consolidated view of all patches and hot fixes on a system can be prepared in just a few minutes. Task Scheduler Pro can also regularly update the credentials used by the AT Service to run applications remotely.

KEY BENEFITS

ENTERPRISE SECURITY

Secures the enterprise by quickly rolling out new patches and antivirus software updates to combat malicious software attacks.

REGULATORY COMPLIANCE

Helps organizations maintain regulatory compliance by auditing the credentials tied to each task, and ensuring that tasks management is only available to approved personnel.

SYSTEM PERFORMANCE

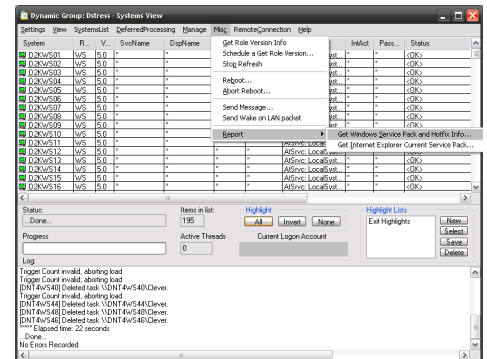

Provides diagnostics information to troubleshoot scheduled tasks failures, allowing administrators to rapidly resolve problems on all Windows systems concurrently.

STAFF PRODUCTIVITY

Increases IT staff productivity by automating a variety of common administration tasks including rolling out patches, backing up data, defragging hard drives, and updating software.

DIAGNOSTICS

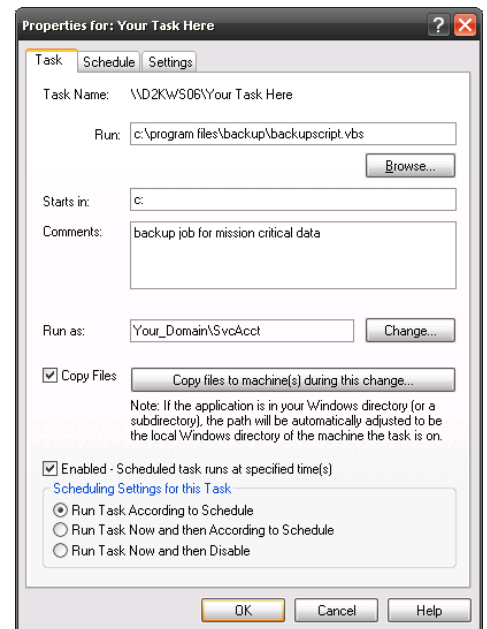

Comprehensive diagnostics information can be used in troubleshooting scheduled tasks failures. This allows administrators to pinpoint the issue causing scheduled tasks to stop running, and then granularly repair the problem on all Windows systems concurrently, ensuring that all tasks continue operating on all systems as intended.

COMPLIANCE

The product provides an audit trail of all activity, with detailed logs of task creations and modifications, an essential element for organizations concerned with maintaining regulatory compliance. Other reporting features include detailed error reports of failed tasks, real-time interactive feedback on the progress of scheduled tasks, recording and archiving sites and settings of all tasks, and an extensive report generator with text, CSV, or HTML output and email scheduling capability. Task Scheduler Pro can also change the credentials used by the AT Service to run applications remotely, a security compliance best practice.

Retrieve installed hotfix and service pack information to aid in deployment.

Add or modify any task to any system from a single dialogue.

SPECIFICATIONS

Task Scheduler Pro is a multi-threaded solution that operates without the use of agents, and gives administrators the ability to simultaneously manage all system in the enterprise from a single console.

“We acquired Lieberman Software products to reduce the time spent in daily systems administration activities.”
